

AMERICAN SOCIETY of HEATING and VENTILATING ENGINEERS GUIDE, 1935

|                                           | Page                   | Resistance,                      | Page     |
|-------------------------------------------|------------------------|----------------------------------|----------|
| Radiator, radiators (continued),          |                        |                                  |          |
| output of,                                | 492                    | of bright metallic surfaces,     | 113      |
| paint, effect of,                         | 493                    | of building materials,           | 95, 632  |
| ratings of,                               | 492                    | in ducts,                        | 354      |
| shields,                                  | 496                    | of exhaust systems,              | 355      |
| types of,                                 | 491                    | of filters,                      | 379      |
| warm air,                                 | 473                    | of insulators,                   | 95, 632  |
| Rain, as dust catcher,                    | 268                    | of sound-insulating materials,   | 308, 310 |
|                                           |                        | thermal,                         | 694      |
| Ratings,                                  |                        | Resistor,                        | 667, 671 |
| of air cleaning devices,                  | 272                    | Restaurants,                     |          |
| of boilers,                               | 410, 475               | tobacco smoke in,                | 52, 212  |
| for central fan conditioning,             | 162                    | water supply to,                 | 618      |
| of concealed heaters,                     | 497                    | Return,                          |          |
| of fans,                                  | 288                    | dry,                             | 688      |
| of furnaces,                              | 387                    | pipe, capacity,                  | 534      |
| of gas-fired appliances,                  | 475                    | wet,                             | 696      |
| of noises,                                | 302                    | Ringelmann chart,                | 682      |
| of pressure reducing valves,              | 539                    | Rock wool insulation,            | 630      |
| of radiators,                             | 492                    | Roof, roofs,                     |          |
| for surface coolers,                      | 162                    | coefficients of transmission of, | 110      |
| for unit air conditioners,                | 214                    | conductivities of,               | 148, 150 |
| of unit coolers,                          | 236                    | solar radiation on,              | 80       |
| of unit heaters,                          | 223                    | ventilator,                      |          |
| of unit ventilators,                      | 231                    |                                  |          |
| of vacuum pumps,                          | 519                    |                                  |          |
| Receivers, alternating,                   | 524                    |                                  |          |
| Refrigerants,                             |                        |                                  |          |
| codes for use of,                         | 157                    |                                  |          |
| types of,                                 | 176, 211, 379          |                                  |          |
| Refrigerating capacity,                   | 170                    |                                  |          |
| Refrigerating plant,                      | 186, 188               |                                  |          |
| compressor,                               | 190                    |                                  |          |
