WEEKLY HIGHLIGHTS - 3/3/83

- MAP was contacted by Alabama Environmental Commission regarding PCB sediment contamination in "excess of 50 ppm in Choccolocco Creek" in Anniston, Alabama. Choccolocco Creek is part of the storm drain system in Anniston receiving some run-off from Snow Creek and the Anniston Plant, a former PCB manufacturing site. Craddock and Cayard of MAP will visit Alabama Environmental Commission representatives Monday in Montgomery.

- Soda Springs Plant received some local press notoriety when a disgruntled employee of a waste scavenger firm reported to EPA in a signed affidavit that he improperly disposed of PCB transformers obtained at Monsanto for the contractor. Monsanto plant representatives categorically denied the allegation. Inspection of Monsanto PCB records by state EPA officials found no substantiations of the charges. Hopefully the incident as pertaining to Monsanto is ended.
