PERSONNEL CONTACTED: Jim Blanchet, Project Engr.

Joint call made with N.T. Johnson

OBJECTIVE: Obtain more details of fluid requirements for hydraulic ram.

RESULTS

Jim Blanchet gave us a copy of the type of requisition for materials and supplies which will be sent out to bidders on Western Gear's requirements of 15,000 gallons of phosphate ester fire resistant hydraulic fluid. Copies are attached to this call report.

Fluid must meet or exceed requirements of Mil H19457B Type I with fire resistance to be determined per 4.4.1 of same spec. (Diesel fire resistant test method.) We mentioned that our F9-A had a rating of 51 on this test but that we did not have a rating on our Pydraul 312-A. Western Gear's customer for this huge hydraulic ram containing two cylinders 64 inch in diameter at 15 feet displacement with 134 x 32 cubic foot cylinders supplying an accumulator is Global Marine of San Francisco or thereabouts.

Tendered application of rig is uncertain but guesstimated to be an offshore drilling rig. The fluid has no low temperature limitation spec. Quotations for bid should be out in about two months. Installation and delivery of rig is slated for end of 1972.

ACTION REQUESTED

J.H. DAVIDSON: Can we supply Western Gear with P312-A rating on Mil H19457

C.L. BRADFORD: What prices do you propose we quote on F9A, say as our firs choice, and P312-A as alternate?
