industry in the past in that location, then you expect a much higher rate.

Q Okay. Doctor, I am just about done, but I have got to ask you to bear with me, and I want to ask you a couple of hypotheticals; and they are pretty long. So just listen carefully, and I will try to read them correctly.

The first hypothetical, I would like you to assume that an individual worked as an automobile mechanic between the years of 1957 and 1992.

Further assume that early in his career he performed brake work daily and later he performed it weekly and that over the course of his career, it constituted approximately 20 to 25 percent of his work as a mechanic.

Assume that this individual also performed clutch repairs during his career.

Finally, assume that some of the friction products he used contained chrysotile asbestos.

Assuming these facts to be true, and that this individual contracted mesothelioma, do you have
