TECHNICAL SALES REPORT

U. S. Department of Agriculture June 30, 1955
 Beltsville, Maryland
 Messrs: Irwin Harnstein and W.N. Sullivan

Monsanto Representatives: Messrs. Warren Easley
 and P. G. Benignus

Mr. W.N. Sullivan indicated that the following field tests with Aroclor in the insecticidal field are under way. We welcome Research and Development people following this as well as ourselves and, therefore, pass this information along to all whom we believe may be interested.

<u>Product</u>	<u>Test Location</u>
Aroclor-DDVP	1) Orlando, Florida, dairy barns. 2) Corvallis, Oregon, grub worm control on cattle. 3) Bronensville, Texas, cotton insects. 4) Florence, South Carolina, truck crop insects. 5) Tallulah, Louisiana, cotton crops. 6) Presque Isle, Maine, potato insects. 7) Mexico City, Mexico, fruit insects, coddling moth and fruit flies. 8) Honolulu, same. 9) Vincennes, Indiana, same.
Aroclor-Lindane-Thiuram	State College, Mississippi, seed treatment (corn).
Aroclor-DDVP-Heptachor	Beltsville, Maryland, alfalfa weevil and spittle bugs.
Aroclor-Lindane	Beltsville, Maryland, flies, roaches

In view of the possible future value of dimethyl dichlorovinyl phosphate, the results of these field studies with Aroclor will be of interest.

The people at Beltsville seemed to appreciate it when we mentioned that we have sold truckload amounts of Aroclor for use in combination with Lindane and other insecticides. Evidently they were not aware that their work has led to commercial value. We should make an effort to keep in touch with them and give all encouragement justified.

P. G. Benignus
