ASBESTOS PRODUCTS

Date

FEBRUARY 27, 1976

This letter to cover one customer and one subject only.

Attached is a memorandum from B. D. Hillegas of the Consad Research Corporation. As indicated, Consad is under contract to OSHA to study the technical feasibility and economic impact of proposed revisions to the asbestos exposure standard. They have asked FPGD to provide input on the economic impact of meeting new proposed standards for handling asbestos products.

You will note on Page 2 of Mr. Hillegas' memo that he poses several questions with respect to controls and cost of control for improving asbestos product air quality.

Please review the questions B through F and provide comments to me by March 15 if you handle products in your Works involving working with asbestos. If you do not handle asbestos products, please indicate so in your response.
