F. W. Porter

Columbus Coated Fabrics - Lithopane

As per our telephone conversation, we are attaching herewith a report covering a comparative study of Pernolith 10N, lot C5900, and Pernolith NR-8. We believe that Pernolith 10N, as represented by this lot, should be a satisfactory material for use by Columbus Coated as a half and half mixture with Albalith 90. This lot, as you will note, is on the slightly high side of A Paster, which is in accordance with their usage of NR-8. The physical properties of this lot, both as such and in their coating, are very close, based on our tests. The sample therefore should be submitted to them for trial, and if they find it satisfactory plant trials seem to be in order.

Drawdowns of these coatings are attached to Mr. Rodger's copy of the report for their inspection.
