PLAINTIFF'S EXHIBIT
GP-2160

Recently we have devoted a great deal of effort to the replacement of asbestos in limestone joint cement products. Our program has now progressed to the field trial stage.

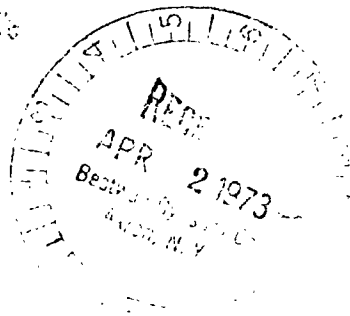

The following raw materials are being shipped to your attention at Akron. Please hold for asbestos replacement trials.

100 lbs. of Gendriv 492S
 200 lbs. of Gelvatol 6000
 750 lbs. of Attagel 40 (This should arrive with the Attagel 40 that is to be used in the new wall texture.)

Please notify us when the raw materials arrive so that we can proceed as quickly as possible with our attempt to replace asbestos.
