

Low Upkeep Cost, of Course and now . . . Lower Initial Cost, too

IF YOU have not recently investigated the possibilities of homogeneous lead-lined and lead-covered equipment for your plant, you may be surprised at the reduction in initial cost. But, wholly aside from this, the savings that homogeneous equipment can make in your maintenance costs are far beyond a slightly higher—or even a considerably higher—initial cost. Much less frequent replacement and fewer consequent shutdowns are due to the *perfect bonding* between the lead and the steel shell. There is no crawling—no buckling—no separation even under vacuum, pressure or temperature variations close to the melting point of lead. That is why this equipment stands up under such severe conditions.

Consult us on any equipment of this nature. Find out for yourself what homogeneous equipment will cost you now . . . and what it will save you later on. The wide experience of our engineering staff is at your disposal without cost or obligation on your part. Simply address Technical Department D.

"United" Products

We also manufacture a complete line of chemical lead-lined pipe, fittings, valves, coils and tank connections, as well as *Hardlead* acid pumps, fittings, valves, cocks and lead covered copper pipe for steam pressure.
