February 28, 1972

Dear Sir:

In early February, we notified you that the Pydraul fluids were being reformulated to remove all chlorinated components. The new Pydraul fluids will become available after April 1, 1972, and we will be phasing in the new products during April and May.

The new Pydraul products will be compatible with the present formulations and no draining, cleaning or changing of seals in your systems is necessary. You need only to add the new products as make up to your present systems.

Each of the new Pydraul fluids has passed the Factory Mutual fire tests for an approved less hazardous hydraulic fluid.

We will be writing again in mid-March to keep you thoroughly informed and abreast of our plans. Should you have questions, please feel free to contact the Pydraul Fluids Specialist in your area.

Yours very truly,

Howard S Bergen
