

All in favor of STRUCTO-LITE* Plaster

What does STRUCTO-LITE have that makes it so popular? It's the perlite basecoat plaster that's pre-mixed. All you have to do is add water—on the job. STRUCTO-LITE won't stiffen on the board either. And it's light-

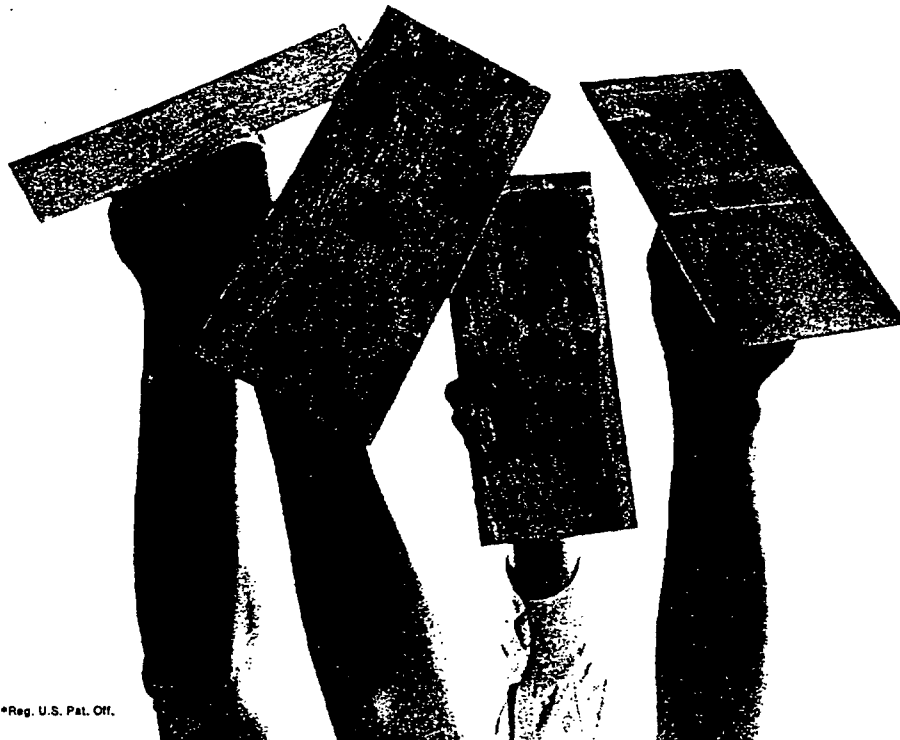

weight, easy to apply. It spreads well under the trowel and doesn't tear under the darby. Controlled suction, too — STRUCTO-LITE will not take on water.

Eliminate your worst on-the-job

plastering problems. Finish faster, more profitably. Use STRUCTO-LITE. For complete information, call your U.S.G. Salesman or write to us at 101 S. Wacker Drive, Dept. PI-610, Chicago, Illinois 60606.
