VISTA

Enclosed is the final MSDS for Calcium Aluminum Sulfate Alkoxide. Mooney should be advised that this material will be classed as a corrosive liquid for transportation purposes.

The skin irritancy study was run in order to obtain a DOT classification result. If they have further questions, I'll be happy to talk to them.

Dear Sir:

I have received no responses to my letter of October 26, 1987 regarding the status of ODC 210 for use in the formulation of oil-based muds for use on the UK Continental Shelf. We would appreciate a response as soon as possible. Please advise if further information is required to resolve the official status of ODC 210.

Sincerely,
