September 26, 1975

Dr. John Goede
Industrial BIO-TEST Laboratories
1800 N. Pershing Rd.
Decatur, Illinois 62526

Dear John:

Please prepare an experimental protocol for a two-year rat feeding experiment that will incorporate the features listed below. This protocol is to be used in conducting the series of experiments outlined in Dr. Levinskas's letter to you on July 10, 1975. Certain additional needs have dictated slight changes in the original protocol outline. The studies which will be conducted will involve two separate sets of controls and three test materials fed at each of two dietary levels.

Number of Rats per group: 30M, 30F

Body Weight and Food Consumption: Weekly for 13 weeks
Monthly until 24 months

Interim (12-month) sacrifice, per group: 5M, 5F

Hematology, per group:- 12 months: 5M, 5F
24 months: 10M, 10F

Clinical Chemistry, per group - 12 months: 5M, 5F
24 months: 10M, 10F

Organ Weights, per group - 12 months: 5M, 5F
24 months: 10M, 10F

Histopathology, per group - 12 months: 5M, 5F
24 months: 10M, 10F

In addition, gross necropsy will be performed on all animals. All tissue masses and gross lesions will be examined microscopically.

STLCOPCB4018848

The study which will be conducted per this protocol will utilize the following groups and number of animals.

Test Material	Group	No. of Rats males	females
-	Control I	30	30
-	Control II	30	30
A	T-I	30	30
A	T-II	30	30
B	T-I	30	30
B	T-II	30	30
C	T-I	30	30
C	T-II	30	30

We will appreciate receipt of your protocol and cost estimate for these studies.

Sincerely,

Paul L. Wright, PhD
Mgr., Toxicology
