VCM Quality

J. N. Flanagan
H. M. Keating

D. M. Brown

We are presently working on a PAFB to install a permanent capacity filter at the VCM loading rack. As you know, we are now using a test filter which has low capacity. The estimated installed cost of the new filter is \$4,300.

Could you give us, for use in the justification, the value to Monsanto of

- 1) Shipping uninhibited VCM which needs no caustic scrubbing to our outside customers, and
- 2) becoming competitive on the basis of foreign matter (polymer, rust scale, etc.).

J. W. Kongable
