DOCUMENT DESCRIPTION: 0000 Excerpt from Document regarding How to Answer Questions About Tramolite in our Products

6. How do we handle questions about tremolite in our products?

A. Fit the depth of answer to the level of interest of the person asking the question.

0364806

Basic casual question response (ex MONOKOTE)

1. There can be minute amounts of tremolite in vermiculite as a naturally occurring tramp mineral.

2. The government has defined tremolite as an asbestos material. However, studies indicate that its affects are less serious than for the common forms of commercial asbestos.

3. In the common uses for vermiculite, exposures are substantially below the levels allowed by OSHA and, therefore, we see no problems with OSHA. We don't expect any problem in complying with OSHA in expanding plants or mines.
