Dr. Robert A. Kehoe
University of Cincinnati

Dear Sir:

In an article in the Times-Star
Apr 6 33, referring to your work on
lead poisoning, it is stated that
the presence of lead in the bodies
of Mexican Indians establishes the
fact that lead is normally present
in the human body.

I do not see that the presence
of lead in their bodies establishes
this fact. Since the soil, vegetation
and animals all contained lead,
the Indians could not well
escape it altho of course they

that they have no specific function. On this aspect of the
question we are not entitled to an opinion at the present time.

May I again thank you for your interest in this problem.

Very truly yours,

not have as much lead, as for example the inhabitants of a city in the United States.

It seems to me that ~~it~~ to determine whether lead was a normal constituent of the body ^{necessary} to find people who were wholly free from lead & examine them for any abnormal condition that is due to lack of lead.

Yours respectfully

W Davidson
