**Subject:** Northern Water Supply Project and Thanks!

Ryan,

Great to meet you out at the Fraiser Ranch a few days ago. Thanks again for bringing the Administrator out to eastern Colorado.

I will make sure to tell Michael Whatley hi for you the next time I talk with him. Although you may talk with him more than I do at this point.

As we discussed, the Corps has been doing a pretty good job dragging out the EIS process for an off-stem reservoir project out here in northern Colorado. Its called the Northern Integrated Supply Project. It looks as though the Corps has said they will have a ROD in 2018, but we are dubious.

<http://www.northernwater.org/sf/WaterProjects/NISP>

Anything yall can do to press from your side would be most appreciated. With as much growth as we are expecting here over the next several years, we will need as much storage as we can get! If I can help make any connections with D.C. and the folks at Northern Water, let me know.

Let's keep in touch.

Our team here likes to just get things done and we are happy to help your office with anything you need out here. Just give us a shout and we will make it happen.

Best,

--
