Longview, Wash. 98632

Dear Louis:

Confirming our phone conversation of 6/30/72, I have attached bulletins on Therminol 66 and Therminol 77.

As you know Therminol 77 has been discontinued and stock is no longer available. However, use of the one drum of Therminol 77 at your plant with Therminol 66 as top up for this study at 600°F should be satisfactory. The two products are miscible and compatible.

I would caution against using the Therminol 77 if it is dirty or acidic. Also, you should protect T-66 in mixture with Therminol 77 or by itself from air contact as we discussed.

Please call if you have additional questions.

Sincerely,

D. E. Roush
