ASBESTOS PRODUCTS

Date

FEBRUARY 25, 1976

This letter to cover one customer and one subject only.

Attached is a letter received from Consad Research Corporation, who is conducting a study on the use of asbestos products in boiler manufacturing.

They are trying to assess the effects of a proposed standard reducing the eight hour average concentration of asbestos fibers to 0.5 fibers per CC and a ceiling concentration of 5 fibers per CC.

Based on the question asked on page 2 of Consad letter, Engineering can reply to questions a. and f. We feel that Manufacturing and B&W Construction Company are in a better position to reply to questions b. through g. as these questions are related to areas under their control.

An investigation has been instigated by Engineering and Purchasing to find suitable replacement materials for the asbestos products now used in damper and door seals.

Would you please send your reply letter to Components Engineering or directly to C. M. Davis so that a final draft letter can be finalized for replying to Consad Corporation.

W. C. Stoll
