Air Products and Chemicals INC.
ESCAMBIA PLANT
P. O. Box 467, Pensacola, Florida 32592

19 February 1975

Mr. Harvey H. Duhamel
216 Ariola Avenue
Pensacola, Florida

Dear Mr. Duhamel,

You possibly have read recent articles concerning the finding of a form of liver cancer in some workers or former workers in the PVC Industry. The presumption is that the disease has been contracted from lengthy exposure (15-30 years) to high concentrations of vinyl chloride monomer.

Air Products & Chemicals, Inc. has gone to great lengths to review the work histories of our employees and to provide medical examinations for all of those with significant work histories in PVC production. We have also examined pathological records of deceased employees. Attached is a recent news release outlining the results of these programs. We were pleased to find that the results showed no case of liver cancer.

Air Products wishes to further expand this medical program by contacting former employees nó longer with our Company and offering to provide them with a similar set of medical examinations and tests. Employees with at least three years work experience in the PVC Plant are being offered the examination and tests.

Our records indicate that you were employed by either our predecessor, Escambia Chemical Corp. or by Air Products after they acquired Escambia Chemical Corp.

You may avail yourself of this physical examination and tests which are offered to you free of charge by Air Products by calling Mr. J. F. Odom, Personnel Manager of our Pensacola Plant, at 904-994-5511 for full details of the doctors to whom you should report, locations and dates available for this series of examinations and tests. Any trip expenses involved in getting to the doctors closest to you will have to be borne by you.

Very truly yours,

R. E. Jones
Plant Manager
