November 20, 1974

TO: R. N. Dion

FROM: C. L. Dickinson, Jr. CLD

Literature searches for carcinogenesis and mutagenesis for the following compounds are requested as a result of our meeting with P. J. Graham, G. R. McClure and E. E. Swain, Jr. of F&F on Friday, November 15, 1974.

L. Lib searching C.A. back from

- Toluene ~~comp~~
- n-Butylacetate
- ~~Methyl ethyl ketone~~
- Ethyleneglycol, monoethyl ether
- Melamine®

Melamine® is an American Cyanamide product, and we should call them for any data they have available.

The question of "carbon black" was raised, and we should undertake a survey of its carcinogenic and mutagenic potential to establish a position for all of Du Pont.
