that Ford did not have any dust study results which measured the amount of airborne asbestos fibers at any of Mr. Grewe's places of employment.

In response to admission number 248, Ford admitted that inhalation of cigarette smoke does not cause or contribute to mesothelioma.

In response to admission number 240, Ford admitted that Mr. Grewe's mesothelioma was more than likely asbestos related.

In response to number 141, Ford admitted that it never performed or contributed funds to any studies or research to determine the effectiveness of any dust masks or respirators to prevent asbestos inhalation.

And in our Ford Exhibits Number 86 which are interrogatory answers by Ford in the Corsino case, United States District Court for the Eastern District of Pennsylvania in 1984, Ford was asked to state whether it is aware of the practice of using compressed air to remove accumulated dust and debris from brake drums and friction mechanisms during brake
