TECHNICAL DIVISION

September 25, 1961

Monsanto Chemical Company
Organic Chemicals Division
800 North Lindbergh Boulevard
St. Louis 66, Mo.

Gentlemen:

We note in your product bulletin entitled "The Aroclor Compounds" that you make reference to use of Aroclor 1254 as a dedusting agent to control the dusting of highly reactive compounds. As an example you suggest "a few tenths of one percent will control the dusting of calcium hypochloride." (Sic hypochlorite). The use of Aroclors to control the dusting of calcium hypochlorite is covered by U. S. Patent 2,921,911 granted January 19, 1960. We will appreciate it if you will make reference to this patent as a footnote in your next printing of this bulletin.

Very truly yours,

PENNSALT CHEMICALS CORPORATION
