

Sure Protection along the Right-of-Way!

DUTCH BOY red-lead forms a sure and lasting protection for metal surfaces. It gives a tough, durable and elastic paint film that remains unbroken over long periods of time.

It is this ability to protect metal against corrosion that has resulted in red-lead's being accepted as standard by railroads for bridges, signal towers, freight cars, etc. All along the right-of-way it preserves metal . . . keeps down maintenance cost.

Dutch Boy red-lead is sold in paste and liquid form. The liquid comes in the natural orange-red and also in greens, browns and black. The paste is supplied in the orange-red, and may be shaded to dark colors.

Write our nearest branch for detailed information on any phase of metal painting.
