ASBESTOS - SCREENING TEST FOR UNIDENTIFIED INSULATION

Please acquaint yourself with the NIOSH method to determine if insulation contains asbestos. Presently, we are treating unidentified insulation as though it contained asbestos. This requires that ABI employees are fully protected, that monitoring be done and that the insulation be carefully handled during removal, storage and disposal.

Request that the "home made kit" referred to by E. S. Ramey be prepared so that field analysis can be made.

G. Ille
