June 25, 1991

Mr. D.A. Willsie
Product Line Mgr.
I.T.T. Parts Supply Div.
3000 University Dr.
Auburn Hills, MI 48057

Dear Doug,

We have attached the drawings indicating a revised drill pattern for O.E. brake shoes currently FMSI designated 451, 452, and 473. This revision is effective on General Motors' 1992 Model Year light truck production commencing August, 1991.

As we also discussed, Rockwell 15" x 4" open end T-Brake and Eaton 15" x 4" steering axle shoes, both drilled 1308, have no aftermarket identification. The O.E. Part numbers are A3222Q1837 and 1005840 respectively, and we request that FMSI numbers be assigned to these brake shoes. — S648 S649 Rockwell.

Finally, we wish to express our support for your heavy duty double web brake shoe proposal. In view of new designs to avoid patent infringement coupled with individual manufacturer part number designations predicated upon block descriptions and application suffixes, the brake shoe customer cannot identify their requirements. Although heavy duty vehicle application affords many brake options, surely identification could relate to axle manufacturers with FMSI numbers assigned to the various brake shoes.

Good luck,

Philip E. Church
General Sales Mgr.

Ferndale, MI 48220

Dear Mr. Church:

We have just received the two Rockwell and Eaton shoes which were forwarded by Doug Willsie. We will be making assignments for the shoes as soon as we can draw up sketches for them. We compared the new Eaton segment which we just received to the 1308 segment and the sample shoe, they do not match. Your shoe matches the 1308 segment but the new Eaton 15x4 segment does not match either. Are you aware of a "new" Eaton 15x4 steer axle brake for up to 12,000 pound service, and if you are, can you get a sample shoe? The width spacing of the holes in on 2" center, 14 hole pattern. The hole spacing is uneven with the first set of holes either side of center spaced at 20° 20′ and 16° 33′, the second set either side of center is spaced at 38° 46′ and 34° 59′ and the third set either side of center spaced at 57° 13′ and 53° 26′. The inside lining radius 7.453" (shoe radius?).

Any information you can provide would be appreciated because another 15x4 segment without a matching shoe would only serve to confuse the issue in the aftermarket.

I am working on the lining segment drawings for the 451, 452 and 473 shoe revisions and hopefully will have something soon.

Thank you for your assistance.

Sincerely,

FRICTION MATERIALS STANDARDS INSTITUTE

Ferndale, MI 48220

Dear Mr. Grattan:

Thank you for the drawing of the GM 14 x 2 1/2 shoe, drawing number 3873515. For your information the GM kit number for the set of four lined shoes is 15618194. We will be assigning an FMSI number to this shoe and it will be in our next Shoe Bulletin in about two months.

Again, thank you for the drawing. Your assistance is greatly appreciated.

Sincerely,

FRICTION MATERIALS STANDARDS INSTITUTE

Mr. Jack McConnell
Uni-bond Brake, Inc.
1350 Jarvis
Ferndale, MI 48220

Dear Jack:

Enclosed are some of the prints we discussed today.

D50 This is the steel for 788, 7013A. The inner is the steel used for FMSI 788 lining; The only difference for the inner when used for 7013A is the lining drilling. I believe most use the 788 drilling on the inner in the aftermarket.

D77 The steel used for FMSI 7010 lining.

D85 I have the undrilled steel for the 7018 lining only. I do not have steel drilled prints for 7018A

D86 I am enclosing both drilled and undrilled steel for the 7019 lining. The drilled steel is Aimco's pattern for the aftermarket. In addition, I am sending the D123, below, which is the steel for the 7019A lining, an OEM drilled version of 7019A.

D123 The OEM drilled steel for 7019A

D89 These drawings for 7024A had dimensions blacked out by steel source. I am also sending copies of D129, which were used for 7024B lining.

D129 These are for the 7024B as noted above.

D202 These are for the FMSI 7070A lining. As provided by Delco, they do not give shoe details.

Sincerely,

Dear Mr. Grattan:

This is to let you know that the Board of Directors have now completed the mail ballot, and that Uni-bond Brake has been voted into Licensee Membership in the Institute. Your Membership will be effective as of this date.

As a Licensee you are entitled to purchase Institute catalogs and certain prints applicable to brake shoe manufacturing. You also have specific rights on use of the Institute's copyrights and trademarks in marketing products of your manufacture.

I will put your name on our mailing list for our technical bulletins which include brake shoe prints (often silhouettes) when released. If you would rather have someone else at Uni-bond on this mailing list, please let me know. I can send copies of the technical bulletins to more than one individual at your company, but the gratis prints go only to one addressee.

Sincerely,

FRICTION MATERIALS STANDARDS INSTITUTE

LICENSEE APPLICATION FILED BY UNI-BOND BRAKE, INC., OF FERNDALE, MICHIGAN

This is to advise the Membership that we have received an application from Uni-bond Brake, Inc. of Ferndale, Michigan to participate as an Institute Licensee.

We had been advised earlier that Uni-bond Brake had been using the FMSI Numbers in marketing their brake shoes. These shoes are primarily for air brake applications, and the FMSI block designation (4515, 4551, etc.) was being used to denote the brake shoe. We wrote Uni-bond Brake on this and have now received their application. That application is now being reviewed by the Membership Committee before balloting by the Board of Directors.

If any Member knows of any background that either supports or counters this application, please send your comments to the Institute Office. It would appear from the application, that Uni-bond Brake is eligible to serve as a Licensee. We had been advised by one of our Members that Uni-bond was a manufacturer of brake shoes, and were sent copies of their sales literature indicating usage of the FMSI Numbers.

The foregoing is sent as a matter of information and to solicit any background material on the applicant.

E. W. Drislane
Executive Director

Uni-bond Brake, Inc.
1350 Jarvis
Ferndale, MI 48220

Attention: Sales/Marketing Manager

Gentlemen:

I'm sure you're aware of the Friction Materials Standards Institute (FMSI) and its catalogs and FMSI Numbers used in the brake aftermarket. One of our Members, a brake lining manufacturer who purchases shoes from you, recently sent along a copy of a Uni-bond Brake price sheet. A copy is enclosed. While both FMS and FMSI are registered trademarks, the FMSI Numbering System, the numbers themselves and the bulletins and catalogs in which they appear are copyrighted. We ordinarily grant permission for use of our copyrighted materials to Members of the Institute.

It is my understanding that Uni-bond is a manufacturer of brake shoes, and as such it would be eligible for Licensee Membership in the Institute. A list of Licensees and other Members, as well as some background on the Institute is described in the enclosed literature. For reference, I am enclosing the following:

1 copy - Constitution and By-Laws
2 copies - Application for Licensee Membership
1 copy - Booklet - Friction Materials Standards Institute
1 copy - List of Membership

If Uni-bond were a Licensee Member of the Institute, we would grant permission for use of the copyrighted materials including FMSI Numbering System and the numbers themselves. While we do not have specific prints on the large brake shoes used on Timken, Eaton, Standard Forge and other brake and axle manufacturer's products, we can make prints available on the brake blocks themselves--such as FMSI 4515, 4515E, 4515G, 4602, etc. These prints could assist in detailing drilling locations, inside radii, etc. If Uni-bond were a Licensee, it would be able to purchase Institute catalogs, prints of blocks applicable to the shoe sizes in your line, etc.

Most brake shoe suppliers use our copyrighted numbering system and the FMSI Numbers to identify parts on price lists, catalogs, sales literature, etc. The system was set-up to help suppliers, rebuilders and installers in the aftermarket. As indicated, the numbers and systems are copyrighted and FMS and FMSI are registered trademarks of the Friction Materials Standards Institute. Licensees and their customers are given permission to use FMSI numbers on their products, sales literature, etc.

The annual fee for a Licensee is $600. While we have maintained a stable dues level for several years, there is the possibility of increases in the future.

We believe that Licensee Membership would be of value to Uni-bond, if for no other reason than permission to use the copyrighted FMSI Numbers and numbering systems. If you wish to apply, please have one application copy completed and sent to the Institute with a check for $600. This $600 would be applied to the first year's dues. If, for some reason, the application were not accepted, the $600 would be refunded. Our fiscal year runs from July 1 to June 30. The Annual Fee is applied to the full fiscal year--we do not prorate.

If you will not be applying for Licensee Membership, we must ask you to discontinue use of the FMSI Numbers in your price lists and other sales literature. If there are any questions, please give me a call.

Sincerely,

FRICTION MATERIALS STANDARDS INSTITUTE

Edward W. Drislane
Executive Director

September 27, 1983

To: Membership Committee

Subject: Licensee Application filed by Uni-bond Brake, Inc. of Ferndale, Michigan

MEMBERSHIP OF COMMITTEE

In July of this year the Thiokol Membership was assumed by a successor corporation, Friction Division Products, Inc. John Gallagher of Thiokol who had served on this Committee is not with the successor corporation. After review with Mr. Nelson, President, Mr. Phil Dougherty of Friction Division Products was asked to serve on the Committee and has accepted. The Committee makeup is now:

Mr. Stuart Comins, P. T. Brake Lining Co., Chairman
Mr. Rob Nelson, Nuturn Corporation, Member
Mr. Phil Dougherty, Friction Division Products, Member

UNI-BOND BRAKE, INC. OF FERNDALE, MICHIGAN

We were advised in July that Uni-Bond Brake, Inc. was using the FMSI Numbers for marketing brake shoes of their manufacture. They are involved primarily in the heavy duty side of the market and would use the FMSI Block Numbers such as 4515, 4551 and the like to indicate the brake shoe. After gathering information showing this usage, I wrote them in early September concerning use of the FMSI Numbers and invited their application as a Licensee. Their application has now been received along with the necessary prepayment of the first year's annual fee. There is no question but that they are a manufacturer of brake shoes, but this does not preclude their acting in other capacities such as rebuilding, etc.

Mr. Michael Grattan is President of Uni-Bond Brake. The application appears to be in good order. Based on our Constitution and By-Laws, they are eligible to serve as a Licensee. Would you please review this application and return the enclosed ballot. While The Board of Directors will have the final vote on this Licensee application, your vote is important to make a preliminary assessment of applicant's eligibility.

E. W. Drislane
Executive Director
