Engineering Dept. - Small Projects Group:
Colored Pigments Utilization

Newark and Newport site personnel are satisfied with current CtP project support considering the limited availability of capital funds for the business. No project design was carried out by the Engineering Dept. in 1982 and none is forecasted for 1983 and beyond. In the recent past, only the QA Rupture Disc project at Newport and portions of the Newark Waste Treatment project were contracted

& the Engineering Dept. Both sites make use of Engineering consultants for technical advice on programs and projects under CtP control.

Current manpower and cost for project engineering activities at the two sites are summarized below:

Site	1982 Actual		1983 F/C	
	MP	$M	MP	$M
Newark – Direct	1	78	1	85
(Grasselli P.E) – Contract				
Newport (Production)	4		3
