

Shop assembled **WASTE HEAT** recovery equipment by **Vogt**

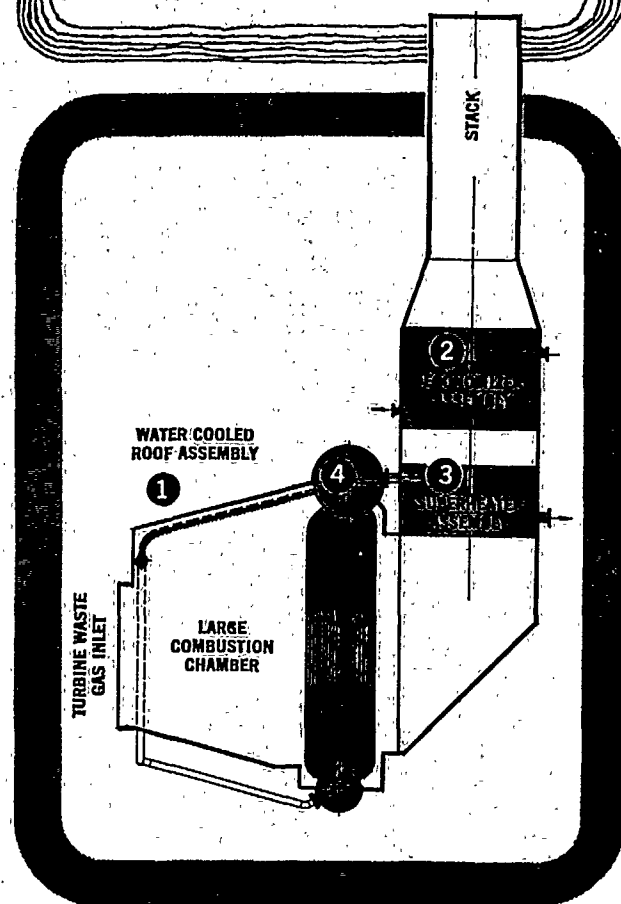

*A complete unit on
one train leaves our plant
ready for on-site assembly.*

No matter what your steam generating requirements are, if you plan to use **WASTE HEAT** from a 1,500 to 30,000 h.p. Gas Turbine, call on Vogt's experience in designing Waste Heat recovery equipment for your plant.

When your needs are known, Vogt will help you to determine an economical approach to your problem. This involves the most practical and efficient design, whether it be standard package, full field assembled, or **SHOP ASSEMBLED COMPONENTS** such as shown in the above train shipment.

The advantages which result from Vogt's engineering approach to your needs will minimize field erection costs and plant operation interruption during installation. Vogt engineering will further assure on-site assembled components of manageable size and weight to meet your space and installation requirements.
