We have enough 7-D Asbestos in stock to formulate approximately 95 tons of Acoustical Plaster, however we have completely depleted our inventory of 7-M Asbestos as used in Patching Plaster 962 and Certiflor 843. Since we have such a large inventory of 7-D Asbestos would it be possible to substitute 7-D for 7-M in either or both the 962 and 843 formulas or should we re-order the 7-M Asbestos? Please advise.

DICTATED BY J. R. Watt/md

It will be satisfactory to substitute 7-D asbestos for 7-M in patching plaster. This fiber is a little longer than 7-M, so be sure the patching plaster is mixed amply long to completely disburse the fibers.

Sales no longer carries Certflor 843 in their line, so this formula is being cancelled.
