

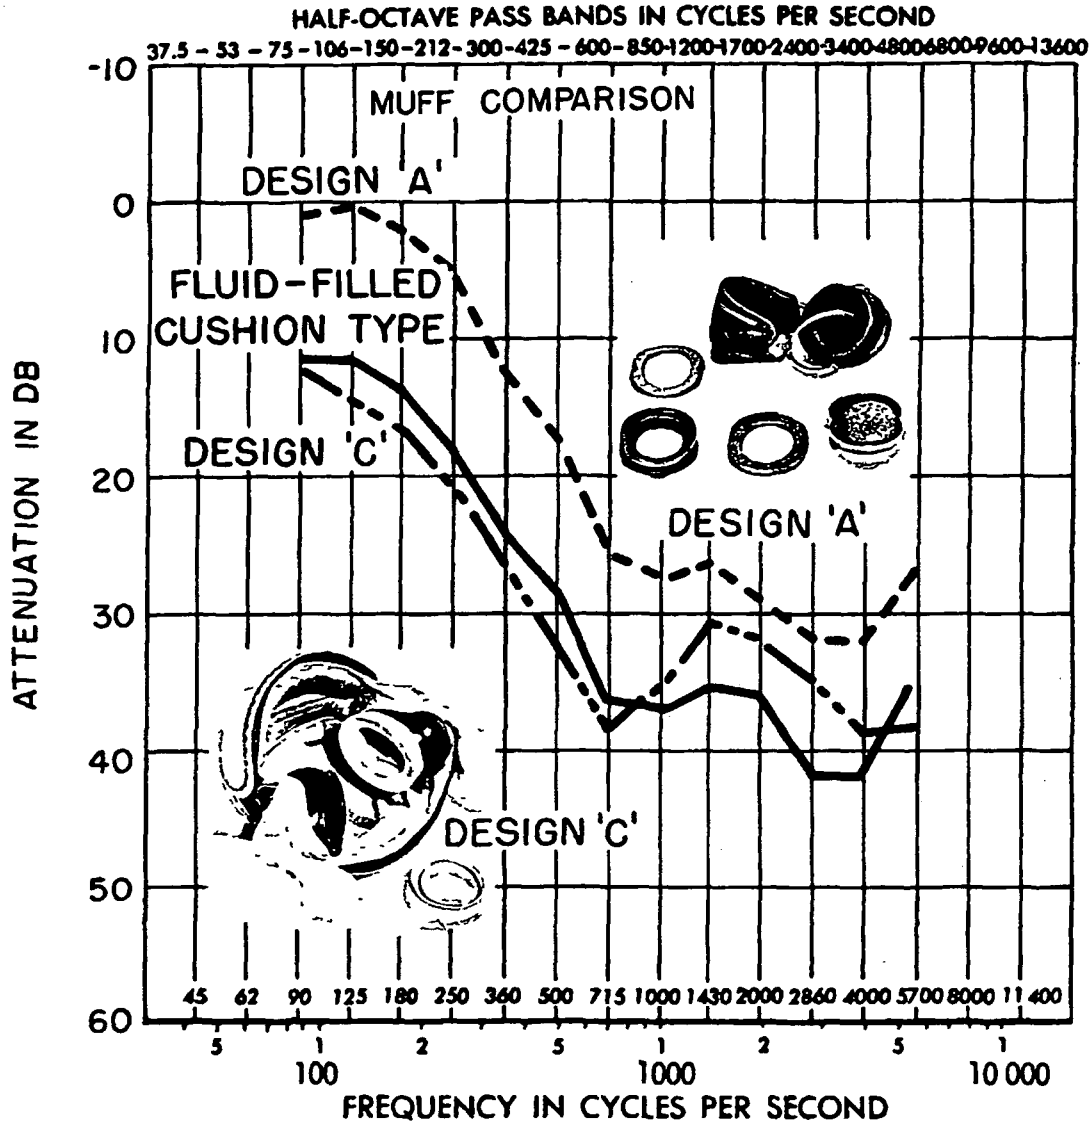

FIG 38-8b – Attenuation characteristics of cup or muff type ear protectors.

Data from J C Webster and E R Rubin, U S Navy Electronics Laboratory

hats to identify different working crews Many colors are available some colors are painted on and others have the color molded in Before painting a hat, consult with its manufacturer so that a coating can be chosen which will not only last but which will not reduce the dielectric properties or attack and soften the shell material Lighter colored hats are cooler to wear in the sun or under infrared energy sources

Ear protection

Increasing attention is being paid to the problem of excessive noise in industry
