YOUR REF.

DR. P. S. I. BARRY

Chief Medical Officer

21st. July, 1961.

Dear Dr. Kehoe,

When we last met in London on April 14th of this year, you may remember that we discussed a number of matters, and I wonder whether you have been able to obtain any information for me on some of these.

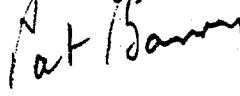

First there was the recommended method of sludge disposal by weathering that Ethyl Corporation have advised their customers as being an effective method. We were not too happy about this and I hoped that perhaps you could advise me further.

Another subject that we discussed was the suitability or otherwise of canister-type respirators for use at mixing plants where TML anti-knock compound was involved. Our Research and Development Department are in the process of doing some test work on this type of respirator in varying concentration of exposure to TML, and any information that you will be able to supply us with would be of great interest to us.

Another matter that we discussed was the work that the Kettering Laboratory had undertaken in the last year concerning the absorption of TML among garage attendants in Los Angeles and San Francisco, and the animal experimental work that you have been undertaking at Kettering with TML. If you can bring me up to date on further information that you may have available at this time, I would very much appreciate it.

With kindest regards to yourself and Mrs. Kehoe,

Yours sincerely,

(P.S.I. Barry)

Dr. R.A. Kehoe,
The Kettering Laboratory,
University of Cincinnati,
Eden Avenue,
Cincinnati, 19,
Ohio, U.S.A.
