

1 released, isn't it?

2 A It is released naturally and released by
3 products in buildings and a lot of other materials
4 that contain asbestos.

5 Q To this day they are used in brakes, some
6 cars, so when we stand outside waiting for the lights,
7 people hit their brakes and asbestos is released,
8 isn't it?

9 A That is what I understand.

10 Q You and I breathe that, when we go out for
11 lunch, we might breathe asbestos, won't we?

12 A Probably.

13 Q Nothing to be overly concerned about,
14 though, is it, Doctor, for you and me?

15 A Well, I don't know that. You know, there is
16 this so-called background or spontaneous numbers of
17 mesotheliomas.

18 The association between getting a
19 mesothelioma and asbestos exposure is so clear that I
20 think we have to worry about individuals who are
21 highly susceptible to getting cancers.
