General Offices

Dear Des:

The Anniston Laboratory is not in position to run GLC analyses on Biphenyl routinely at this time as we have not received our F & M Scientific No. 810 GLC instrumentation. Delivery is expected around March 1st. After this instrument has been installed and calibrated, we can expect to run GLC analyses on Biphenyl routinely. The previous work done at this location has been on the one unit which is on our one multipurpose unit, and at the present time it is booked for the next few months in process study and other types of analyses.

Best personal regards.

J. C. Larkin, Jr.
