From DOT

In one of our OCM health meetings, the obligation was made for a portable GC unit to be defined for EPA type fence line measurements. Re La said Herrin had transmitted information about an Analytical Instruments Development (AID) unit to you.

In the EPA meeting on 6-21, this obligation was mentioned, and no one was aware of whether a real unit was defined.

Have you sent any information to the plants, or do you want me to follow it up?
