Objet: EU Green Deal/PFAS restriction proposal: MedTech Europe Position Paper

Dear Commissioner,
dear Mr Breton,

The need to act patient-centric when implementing the EU Green Deal becomes ever more relevant. One latest example includes the pending proposal to restrict the manufacturing, placing on the market and use of some 10,000 per- and polyfluoroalkyl substances ("PFAS") in the EU. In its present form, severe consequences for patients and healthcare practitioners are at risk as proposed alternative chemicals yet need to be found, prove their fitness for purpose and pass regulatory approval as the stringent sectoral EU legislation requires. We enclose a copy of our latest position paper and policy recommendations to resolve the matter and design realistic transition pathways for the sector, including its manufacturing and supply chain.

We remain available for any further information and would be delighted to discuss this critical matter with you at your earliest convenience.

Yours sincerely,

[REDACTED]
