REPORT OF THE MANAGING DIRECTOR

JOHN F. McMAHON

Wartime demands for maintaining manpower in industry stimulated industrial hygiene during the past year as never before. Tangible indicators of this fact are increased demands by industry upon Industrial Hygiene Foundation, and upon all public and private agencies, for plant hygiene surveys and advice; a substantial increase in Foundation membership; increased attention to healthful working conditions in labor relations; and sharp increases in the sales of respirators, welding helmets and other personal protective equipment.

Thirty-three companies and employer associations joined the Foundation during the year, bringing the total membership to 256. Meanwhile, 21 more Federal and State agencies, branches of the Army and Navy, universities, etc., subscribed to the Foundation's publications. This brings the number of subscribers to 60. A list of the new members follows:

New Members

Allison Company
American Brake Shoe Co.
American Cyanamid Company
American Iron & Steel Institute
Robert F. Coleman, Inc.
Consolidated Mining & Smelting Co., of Canada, Ltd.
Corning Glass Works
Davison Chemical Corporation
Ebasco Services, Inc.
Electro Refractories & Alloys Corp.
Falk Corporation
Firestone Tire and Rubber Company
Firth Sterling Steel Company
Fuller Merriam Company
Galvin Manufacturing Company
Garco Products, Inc.

Gardner Machine Company
Hawley Products Company
Hercules Powder Company
Mauricio Hochschild
O. Hommel Company
Jack & Heintz, Inc.
Kirk & Blum Manufacturing Company
Mackintosh-Hemphill Company
Monsanto Chemical Company
New Jersey Zinc Company
Pullman-Standard Car Mfg. Co.
Joseph E. Seagram & Son, Inc.
South West Box Company
Strathmore Paper Company
Sun Rubber Company
U. S. Rubber Company (Abrasive Div.)
S. K. Wellman Company

Plant Surveys

Approximately 50 hygiene surveys were conducted in plants of member companies during the year, ranging in length from several days to several weeks. These investigations were in addition to a score of short plant visits and inspections in helping companies control noxious and obnoxious exposures in workplaces. Some of the survey work not only eliminated possible health hazards, or disagreeable working conditions, but also introduced substantial operating economies. To illustrate, controlling the exposure in one plant effected a saving in the use of a solvent; in another factory the amount of a toxic gas required in a casting operation was reduced; in still another instance a corrosion problem was solved. These examples show some of the added benefits of industrial hygiene applied by scientists and engineers with practical experience in industrial operations.

Supplemental benefits are improvements in labor relations. In one plant the Foundation averted a work stoppage by reducing the concentration of an irritating dust to reasonable limits. Outside the Foundation's contacts
