Subject: Engineering Services

Date: April 19, 1968
CC: W. J. Sheehan ✓
R. McGranahan

As discussed during your recent trip to S&K, we need the services of Mr. McGranahan in two areas. The critical area is the dust problem created at the pulper and the second problem is the SprayCraft move.

There are several probable solutions to the dust problem including the "lid" type of arrangement we discussed with Mr. Cygler and Pete's own suggestion of wetting the material down and "screwing" it into the pulper. I am sure Mr. McGranahan will have some ideas of his own and possibly the best combination of ideas can be worked out while he is out here.

The SprayCraft move involves the combining of the equipment in the present two buildings and a reduction of the crew size to help justify the move.

I would anticipate a week of Mr. McGranahan's time would be required and assume that S&K will pay out-of-pocket expenses for Mr. McGranahan only. Because of the potential health hazard created by the dust, the sooner we can secure Mr. McGranahan's service, the better.
