Thanks Ralph. I'd already heard something of this via Exxon in Europe. Can you advise on which industry groups are being targeted for funding : refiners, benzene producers or both ? From the outline info available at present, this looks an interesting initiative (given previous study suggesting link between benzene and various cancers). If you can also let me know our possible \$\$\$ contribution, I'll put my 'Tox PSA' hat on and raise with business VP. Many thanks

Tony: information from Exxon on the proposed China Benzene study; Shell Chemical is invited by API to become part of a consortium to fund this study.

Ralph - as you requested --- attached are some materials regarding the proposed Shanghai studies. The first document was presented by Mike Redemer of Texaco at the IPIECA meeting last month, Pat Beatty wrote it.

The second is an updated presentation that I wrote at the conclusion of a study planning meeting last year at EBSI. Subsequently, Gerry Raabe presented it to an IPIECA group. I've modified it slightly to reflect some re-alignment of the projects.

Hopefully, this will help you see where we're coming from. Feel free to talk to Pat, me, or Jim if you need anything clarified.

Rob

Tony: I'll pass your questions about outreach funding on to David Steup - I told you all I learned at the meeting. I believe both US and international refiners and benzene producers, and anyone else with an interest and \$\$ are invited to participate in the Consortium, but I don't know the mechanism by which these are being identified and approached for participation. Dave....?
