C. S. HORNBERGER
HASKELL LABORATORY

FLUORESCENT ORANGE TARGET PAINT
389-H-10944

Remington Arms Company is seeking toxicity information on subject paint. A copy of their letter is attached along with a copy of the formula breakdown.

We have tried to get some information on the pigments used but as can be seen from their letter, the Lawter Chemical Company has submitted only limited information. Perhaps you can get more details from them if necessary.

Would you please provide answers to Remington's questions or prepare a letter to them which can be forwarded by our Industrial Sales people?

As can be seen from the attached correspondence, we would like to answer Remington as soon as possible.

E. E. SWAIN, JR.
