

WHEEL WEIGHTS

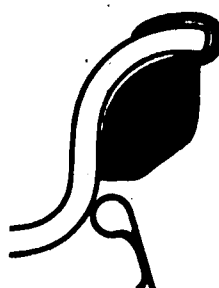

Designed to work with tube or tubeless tires.

Wheel weights are made of antimonial lead, tin and other elements blended into an alloy that gives an excellent appearance and a hard and durable product. The clips are made of the best spring steel and give the maximum elasticity and toughness. They are bright plated to prevent rust and corrosion.

**Fits All 13", 14",
15", 16" Wheels**

Except where special wheel covers may require the Special weights listed below.

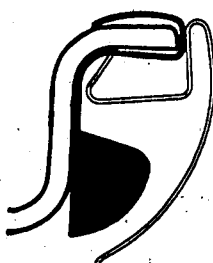

CROSS SECTIONAL VIEW

View showing use with large wheel covers. Cut reveals the form fit between the weight and rim flange. Also the ample space between the lip of the clip and tire sidewall.
