PERSONS INTERVIEWED:

Bill Reisdell President

CALL OBJECTIVE:

Call made on HPO prospect manufacturing Acrylic paints

RESULTS OF CALL:

Acrylux is very similiar to Bond Chemical Previously called on today in that they manufacture acrylic trade sales and roof paints exclusively. The only difference Bill said is that when they do run into a problem with cracking on their paint which they now thicken with Dow's Methocel, they simply advise the complaintant to caulk over it which is a great solution to the problem if you can get away with it. Bill is an old expert having been in the paint business about 30 years and does remember using asbestos but thought that most people had gotten away from it. Discussed the many applications where Calidria was now being used in coatings and the tennis topping compound caught his eye being as it is acrylic based and a popular item in Florida. Gave Bill a copy of the formulation and our HPO properties & price list along with my card so he can contact us should he decide to make the coatings.
