BABY PRODUCTS COMPANY

RARITAN, N.J. 08869

February 28, 1977

SUBJECT: Lot 228P Baby Powder  
Trace Minerals and Trace Elements

TO: Mr. G. Lee  
to  
File 0503.01

The attached letter report relating to the compounds assignable to the trace elements completes the ultra-sophisticated analyses which I instituted some months ago.

The work was aimed specifically at firming up whether or not any subtrace amounts of nickel, cobalt, and chromium existed in the non-talc associated minerals.

This completes our work on 228P from the mineralogical and chemical points of view and I suggest it be incorporated in the main files for future reference.

W. Ashton
