Re: PVC Survey; Conference with Dr. Sanford Miller

Ladies and Gentlemen:

The purpose of this letter is to bring you up-to-date regarding the status of the Vinyl Institute's efforts to provide market information regarding food contact uses of vinyl chloride polymers to the Food and Drug Administration (FDA). You will recall that in our letters dated September 9 and December 28, 1982, we informed you that FDA had requested market data regarding food contact applications of vinyl chloride polymers. This information was deemed essential by FDA to provide support for its announced intention to deal with the regulatory status of vinyl chloride polymers on some comprehensive basis. In response, the Vinyl Institute has undertaken to provide the information to FDA, and we are developing a questionnaire for use with the Institute's members that should lead to our being able to make the estimates FDA has requested.

Early draft versions of the questionnaire were circulated to members of the Vinyl Institute for criticism and comment. A revised version was then given to FDA for its review to assure that when the

task is completed, the results will be of maximum utility to the Agency. We are enclosing a copy of our report to Mr. Jerry Weisz, acting Executive Director of the Vinyl Institute, describing the results of our April 7, 1982, meeting with the FDA staff.

Generally speaking, the Bureau of Foods staff appeared genuinely interested in removing the "little cloud" that has been impeding the marketing of vinyl chloride polymers. We expect the Agency to move as rapidly as its structure will permit. For the present, we remind you once again that there is no regulatory ban on the marketing and use of vinyl chloride polymers, except as regards packaging distilled alcohol beverages.

We shall, of course, keep you informed of the results of the survey and subsequent FDA actions. In the meantime, if you have any questions, please do not hesitate to contact us.

Cordially yours,

Jerome H. Heckman/cm
