Dr. George Calingaert
Ethyl Gasoline Corporation
723 East Milwaukee Avenue
Detroit, Michigan

Dear Cal:-

Thanks for your letter of April 2nd and for the information which you have carefully outlined in it.

Proceeding to your last question, I think your calculations are sufficient to provide a proper basis for our selection of a material for our experimentation without benefit of actual experimental determinations.

In confirmation of our telephone conversation of last week, this is to let you know that in my opinion it is advisable to use a material that will allow us to anticipate some factor of safety in connection with the use of a new compound. With this idea in mind, I think we should take neither the worst nor the best of the compounds from the point of view of hazards anticipated on the basis of vapor pressures. I believe that lead mix No.N-501 would provide us with a satisfactory material. I do not mind putting on paper my reasons for this choice if you wish me to do so, but I assure you that this is not the result of a blind choice but is made rather with consideration of a number of important factors.

Sincerely yours,

RAK:is

Robert A. Kehoe, M.D.
