Dear Bob:

Attached is a copy of a letter we received here at the laboratory from Mr. C. E. Frudden, Consulting Engineer of the Tractor Division of the Allis-Chalmers Manufacturing Company.

Mr. Frudden raises the question of possible health hazards involved in allowing exhaust gases from leaded fuel to pass through hay or grain which when dried will be used for animal feed or human food. I have written to Mr. Frudden saying that the question he raises is one which, I believe, should be referred to you for an opinion.

If you will let me have the benefits of your thoughts on this matter, I will pass them on to Mr. Frudden.

Best regards,

Bob Scales
