Product Group

I agree with Tom Ford's suggestion. I had suggested this before. Walt's suggestion of Santicizer 5460 I think is good. It is a very well known plasticizer trade-name so no identity would be lost. It has a "clean" sound. I suggest we change now before we approach the FDA again on our petition. Even if we don't get approval, we still hope to sell a lot of 5460 so we don't want it linked to chlorinated biphenyls. What other opinions do we have on this. Please send them in.
