Monsanto Canada Ltd.,
175 Rexdale Blvd.,
Rexdale, Ontario.

Dear Sir:

A member of our Department has been off work with a major irritation to his eyes. One suspected cause is Therminol FR-3 as he has been working in an area where we use FR-3 as a heat transfer fluid.

We have noted in your booklet on Therminol that the "Threshold limit value" which cannot be safely exceeded is 0.5 - 1.0 milligrams of Therminol FR vapour per cubic meter of air in the workroom. Could you suggest to us, therefore, a procedure for measuring the concentration of Therminol FR vapour in a workroom? Could you please advise us also of the type of irritation to be expected if the above limit is exceeded?

Any more detailed information you have in this regard will be appreciated.

Yours truly,

MILLHAVEN FIBRES LIMITED
