TITLE: Insulating Cement

SUMMARY:

This material is now being made for A. P. Green by Eagle Picher under Patent No. 2,237,745. This patent has expired and according to the Patent Dept. we can use the exact formula if we choose. However since it contains 10% asbestos we believe ours should be a non-asbestos formula.

Laboratory tests indicate that we can achieve the small pellets of the present product in about 1 minute of mixing. This means that an in-line production unit is practical.
