SUBJ: Dust Warning Labels for Product Packaging

We have concluded that the attached label should appear on all expanded vermiculite and perlite product packaging and on all mixed products.

Please have the product managers prepare a layout for the printing of this label on all of our packaging. The label should be on the back side of the package, large enough to be easily seen and read, but not so large as to overstate the warning.

I would like to review these by July 1 for approval to send to Purchasing.

B. R. Williams

Attachment

P.S. To complete this task will require a review of all packaging. I have a feeling that we have a number of non-standard packagings around the country and, since we will have to look at everything that is used, this might be a good opportunity for us to develop a "catalog" of all the packaging used in our business. This might lead to more standardization and the elimination of certain packaging which, under scrutiny, we would prefer not to use.

Do you agree?
