Dear Jim:

Nal Beatty sent a draft on to Kehoe in August or September concerning lead contents of the atmosphere. We are hoping that we can have a get-together with Bob sometime next week with regard to publication of some of the latest results that have been obtained as a result of the survey which he has been doing for the Southern California Air Pollution Foundation, together with other surveys which have been conducted since their publication on this subject. The situation, as I see it, looks pretty good but it may be time to publish before some technical society a resume of the situation up to date. I will keep you advised.

Sincerely,

JBM/lt
J. B. Macauley
